Art Unit: 1614

**DETAILED ACTION** 

REQUIREMENT FOR UNITY OF INVENTION

As provided in 37 CFR 1.475(a), a national stage application shall relate to one

invention only or to a group of inventions so linked as to form a single general inventive

concept ("requirement of unity of invention"). Where a group of inventions is claimed in

a national stage application, the requirement of unity of invention shall be fulfilled only

when there is a technical relationship among those inventions involving one or more of

the same or corresponding special technical features. The expression "special technical

features" shall mean those technical features that define a contribution which each of

the claimed inventions, considered as a whole, makes over the prior art.

The determination whether a group of inventions is so linked as to form a single

general inventive concept shall be made without regard to whether the inventions are

claimed in separate claims or as alternatives within a single claim. See 37 CFR

1.475(e).

When Claims Are Directed to Multiple Categories of Inventions:

As provided in 37 CFR 1.475(b), a national stage application containing claims to

different categories of invention will be considered to have unity of invention if the

claims are drawn only to one of the following combinations of categories:

(1) A product and a process specially adapted for the manufacture of said

product; or

(2) A product and process of use of said product; or

Art Unit: 1614

(3) A product, a process specially adapted for the manufacture of the said product, and a use of the said product; or

- (4) A process and an apparatus or means specifically designed for carrying out the said process; or
- (5) A product, a process specially adapted for the manufacture of the said product, and an apparatus or means specifically designed for carrying out the said process.

Otherwise, unity of invention might not be present. See 37 CFR 1.475(c).

## Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 2-3, drawn to an agent which destabilizes lysosomes to increase oncogenic or aberrant protein degradation.

Group II, claim(s) 1, drawn to a method for identifying an agent which destabilizes lysosomes to increase oncogenic or aberrant protein degradation.

Group III, claim(s) 4-5, drawn to a method for increasing oncogenic or aberrant protein degradation in cells.

Group IV, claim(s) 6-7, drawn to a method for treating a disease or condition associated with an oncogenic or aberrant protein.

Art Unit: 1614

2. The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Groups I-IV lack unity of invention because even though the inventions of these groups require the technical feature of the agent of Group I, this technical feature is not a special technical feature as it does not make a contribution over the prior art in view of Gandy et al. (US 5,242,932; 1993; IDS 2/17/2006 reference AC). Gandy teaches agents which modulate or affect the intracellular trafficking and processing of proteins in the mammalian cell, particularly useful agents are chloroquine and related derivatives, such agents can be utilized to inhibit production of Alzheimer type amylodiosis (abstract). Since the technical feature is taught in the prior art, the technical feature lacks novelty; therefore, the technical feature is not a "special" technical feature. Accordingly the inventions are not so linked by the same or a corresponding technical feature as to form a single general inventive concept.

3. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

## For any one of Groups I-IV elected, applicant must elect:

(i) a single agent compound specie; elect from the compounds recited in claims

3, 5 or 7, or a compound specifically disclosed, such as at pp. 10-12 of the instant specification;

Art Unit: 1614

and

If Group IV is elected, applicant must also elect:

(ii) a single disease or condition specie; elect a single specie from the

diseases/conditions disclosed in the specification (e.g., from p. 14, last

paragraph).

Applicant is required, in reply to this action, to elect a single species to which the

claims shall be restricted if no generic claim is finally held to be allowable. The reply

must also identify the claims readable on the elected species, including any claims

subsequently added. An argument that a claim is allowable or that all claims are

generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration

of claims to additional species which are written in dependent form or otherwise include

all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

are added after the election, applicant must indicate which are readable upon the

elected species. MPEP § 809.02(a).

4. The claims are deemed to correspond to the species listed above in the following

manner:

(i) all claims

(ii) claims 6-7

The following claim(s) are generic: all claims are generic for (i) and (ii).

5. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

The technical feature linking the species is a compound that includes chloroquine; and various diseases treated. As outlined above, Gandy teaches chloroquine and related derivatives, such agents can be utilized to inhibit production of Alzheimer type amylodiosis (abstract). Since the technical feature linking the species has been taught in the prior art, the technical feature lacks novelty; therefore, the technical feature is not a "special" technical feature; accordingly, the species are not so linked by the same or a corresponding special technical feature as to form a single general inventive concept.

6. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1614

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

8. The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder.

All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. Failure to do so may result in a loss of the right to rejoinder. Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.

Art Unit: 1614

Any inquiry concerning this communication or earlier communications from the examiner should be directed to TIMOTHY P. THOMAS whose telephone number is (571)272-8994. The examiner can normally be reached on Monday-Thursday 6:30 a.m. - 5:00 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ardin Marschel can be reached on (571) 272-0718. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
